

Slavov SAAP events cluster at codon-Hamming distance 1

Tsour et al. 2026 (>1,000 human samples): 5,873 high-confidence events; 5,611 with unambiguous AA pairs
single-NT enrichment vs 39.5% baseline (binomial $p < 1e-100$)

Blue: observed event distribution across the 5,611 SAAP events. Grey: null distribution of min-NT distance across all 380 AA-to-AA pairs in the standard code. R3 response: visual companion to Table S17 (figure and table read the same JSON, cannot drift).
